

EAGLE AC 60 PLUG & PLAY AC MODULE

NEC 2014/2017
Rapid Shutdown Compliant.

Each ACM includes an Enphase IQ microinverter factory mounted on the module backsheet and sold as a single integrated unit.

FASTER AND MORE EFFICIENT

The Eagle AC 60 is integrated with an Enphase IQ 6 Micro. This integration cuts time across your day with fewer components to stock, transport, carry, and install. Performance testing prior to shipping increases reliability, and a single point of contact for warranty replacements cuts down on service time.

EXPANDABLE DEPLOYMENT OPTIONS

The Eagle AC 60 can make the most of any roof. No roof is too complex or shaded. It also makes system expansion simple when a homeowner wants to add more solar in the future.

SIMPLE SOLAR

From installation to monitoring to ongoing management, the Eagle AC 60 is simple to install, monitor and maintain. In the unlikely event that servicing is required in the future, the microinverter can be popped out and replaced without changing the module.
